

## Quarterly Economic Update First Quarter 2024

Steven J. Toto, CFP®

The first quarter of 2024 continued to reward investors who stayed the course. Both equity and bond markets performed well after the Federal Reserve confirmed that disinflationary trends were consistent and satisfactory enough for them to finally consider monetary easing beginning this year. The S&P 500 experienced its best first quarter since pre-pandemic in 2019. All three major indexes had strong finishes, and both the S&P 500 and the Dow Jones Industrial Average (DJIA) closed at record levels for the first quarter.

For the quarter, the S&P 500 returned over 10% and closed the quarter at 5,254. The Dow Jones Industrial Average finished the quarter at 39,807, adding over 5%. ([www.investopedia.com; 4/1/2024](http://www.investopedia.com; 4/1/2024))

During their March meeting, the Federal Open Market Committee (FOMC) maintained the federal funds rate of 5.25 – 5.5% but signaled that rate cuts were still on the horizon. Equity markets responded favorably to the optimistic news.

Inflation is still a major concern for investors and the Fed closely monitors the Consumer Price Index (CPI), which is a broad measure of goods and services costs. The CPI rose 0.4% in February and 3.2% from a year ago. The core CPI (CPI less food and energy) rose 0.4% for the month and was up 3.8% for the year. Energy costs increased 2.3%, which helped boost the inflation number. Gasoline, specifically, rose 3.6% in February, recouping January's -3.2% adjustment.

## Year-Over-Year Change in the Consumer Price Index (CPI) Through February 2024

Source: Bureau of Labor Statistics ; New York Times

Shelter increased 0.4% on a year over year basis. These two components accounted for over 60% of the monthly increase in the CPI. Data from trips to the grocery stores and restaurants were stagnant, as food costs remained the same on the month.

(Source: [/www.bls.gov/news.release](https://www.bls.gov/news.release))

Shelter costs remain high. Shelter prices were up 5.7% in February. According to a weekly national survey of large lenders by Bankrate, the average mortgage interest rate was 7.07% on a 30-year loan as of March 20, 2024. Despite the high rates, existing home sales still rose 9.5% from January 2024 to February 2024 according to the National Association of Realtors.

## KEY TAKEAWAYS

- The Fed held their federal funds rate range steady at 5.25 – 5.50%, with no changes in the first quarter.
- Inflation for February came in at 3.2% compared to a year earlier.
- An inverted yield curve remains but does not necessarily mean a recession is near.
- In March, the Fed indicated we could see three potential interest rate cuts in 2024.
- Several key factors could bring a possible market correction this year.
- Staying the course and maintaining the consistency of a well-devised, long-term focused plan has historically served investors well.

We are here for you to discuss your unique situation.

March employment statistics, which are considered a strong measure of health in the U.S. economy, were stronger than expected, coming in at 3.8%. This number indicates that the U.S. economy is still strong. Investors are torn between wanting to see a strong economy to support earnings growth, but also wanting a weaker jobs market to give the Fed a signal to start reducing interest rates.

## Inflation & Interest Rates

Interest rates have not changed since July 2023, when the Fed raised rates by 25 basis points. The March 19-20, 2024, Federal Reserve meeting marked the fifth consecutive time in a row that rates were held steady at a range of 5.25-5.5%. The stock market's immediate reaction was positive, with the S&P 500 gaining 0.3%, and the Dow Jones Industrial Average (DJIA) advancing nearly 0.4% that Wednesday afternoon after the Fed's announcement.

The Fed statement released shortly after their March meeting concluded noted that, "Recent indicators suggest that economic activity has been expanding at a solid pace. Job gains have remained strong, and the unemployment rate has remained low. Inflation has eased over the past year but remains elevated."

While the inflation rate is well below the peak levels of 9.1% in 2022, it is still not at the desired level of 2% that the Fed's would like to see. During the Fed's March meeting, the median 2025 and 2026 rate views were raised by three tenths of one percent to 2.9% and 3.1%, respectively, and the longer-run rate was lifted by one tenth of a percentage point to 2.6%. This means the Fed believes that their tighter policy could last longer than anticipated to get back down to their 2% target rate.

Despite slightly higher inflationary data, the Fed remained confident that inflation is still

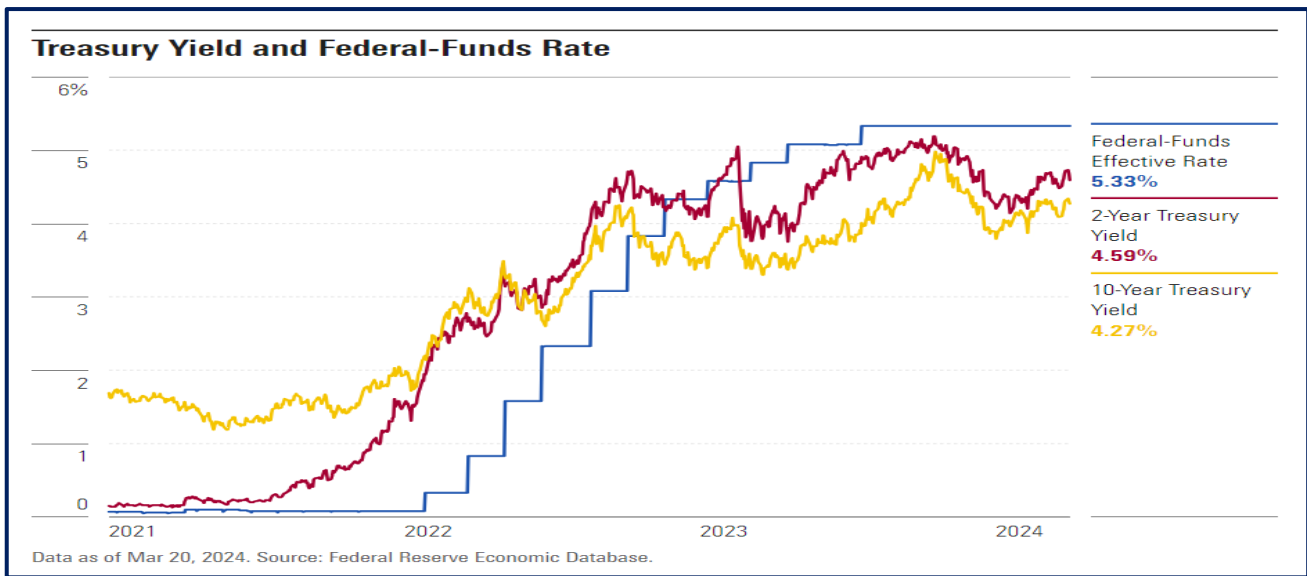

heading toward their 2% target rate. "I think they haven't really changed the overall story, which is that of inflation moving down gradually on a sometimes-bumpy road toward 2%," Chair Jerome Powell stated during a press conference immediately after the March Fed meeting. He continued, "We're not going to overreact to these two months of data, nor are we going to ignore them."

(Source: [cnbc.com](https://www.cnbc.com), 3/20/24)

As of the quarter's end, the Fed is still forecasting three rate cuts in 2024, despite the possibility that inflation may stay elevated for longer than anticipated. These pending rate cuts are highly anticipated as consumers have been coping with the highest rate range level in more than 23 years. While still lower than the all-time high of 20% in 1980, any rate cuts will be welcomed by consumers.

(Source: [tradingeconomics.com](https://www.tradingeconomics.com))

The Fed is committed to their goal of a 2% inflation rate and optimal employment levels and so they continue to keep a close eye on these and other key indicators. Their mandate is to carefully watch the economy and assess incoming data to make appropriate decisions on if and when to lower interest rates.

According to their notes, until the Fed has “greater confidence that inflation is moving sustainably toward 2 percent,” they do not anticipate reducing the target range.

## The Bond Market and Treasury Yields

Treasury yields rose with news of stagnant interest rates cuts, continuing the long-standing inverted yield curve. This means that short-term bonds are yielding more than longer-term bonds.

The quarter ended with the benchmark 30-year yield at 4.34% and the 20-year yield settled at 4.45%. As of the end of the first quarter, this inverted yield curve has remained longer than the previous record of a 624-day inversion in 1978. While many analysts consider an inverted yield curve as a precursor to a recession, we have yet to see an economic downturn, leaving optimism for the Fed’s prized soft landing.

## Investor’s Outlook

Although the year has started on a strong note, investors are always best served by preparing for volatility. Interest rate movements have been a major market influencer and how much, if, and when, are the three questions surrounding the Fed’s anticipated rate cuts this year. The Fed has indicated that this interest rates cycle has probably peaked. “We believe that our policy rate is likely at its peak for this tightening cycle and that if the economy evolves broadly as expected, it will likely be appropriate to begin dialing back policy restraint at some point this year,” Powell said in March. He added that, “The general sense of the committee is that it will be appropriate to slow the pace of run-off fairly soon, consistent with the plans we’ve previously issued.” While the Fed is still looking forward to rate cuts in 2024 and beyond, the timing remains uncertain.

Treasury Par Yield Curve Rates as of March 28, 2024

5-year	10-year	20-year	30-year
<b>4.21 %</b>	<b>4.20 %</b>	<b>4.45 %</b>	<b>4.34 %</b>

Treasury.gov

Currently, the U.S. economy continues to show signs of strength and resilience. Could we see that soft landing the Fed's have been discussing the last few years for the United States? The Fed's goal is to give us a soft landing and avoid a major recession.

While we may avoid a major recession, we believe volatility will remain due to several factors, including continued inflationary pressures, political uncertainty in the U.S., and continued global conflict. Geopolitical risks, deficit spending and problems in commercial real estate are also factors that could cause serious economic problems.

There are six remaining Fed meetings in 2024. If they delay cutting interest rates again, or possibly reducing the number of predicted cuts in 2024, this could adversely affect a market that many analysts feel is already priced for the three currently anticipated rate cuts. Any deviation from this strategy could shake investor confidence. With many unknowns ahead, it is always possible to see a market correction in the near future.

Most economists predict that, should a market correction (a decline of 10% or greater in the price of a security, asset, or a financial market) happen, it will be a modest one. According to the New York Fed, there is an over 58% chance that a U.S. recession (a significant, widespread, and prolonged downturn in economic activity) will happen within the next 12 months.

\*Rounded to closest %      Data Sources: *Truist IAG, Morningstar*

All those years included pullbacks (a temporary retreat of no more than 5-10% in the price of a stock) during the year, however, ten out of those eleven years ended with positive returns, with an average of 11% (coincidentally the average pullback was also 11%). Please remember as with all data, past performance does not indicate or guarantee future results.

While the Fed projects rate cuts in 2024 and beyond, recent history has shown us, anything can happen in a very short amount of time. A re-acceleration of inflation or unsatisfactory data could deter the Fed from beginning rate cuts. Fed officials will be keeping a close eye on key indicators such as housing, labor markets, and core goods that will help them when determining monetary policy.

An area to keep an eye on in the coming months is housing costs. Despite higher interest rates, home values continue to be high. A correction is possible, but inventory is still low, and lending standards have been revamped following the housing crisis in 2008 during the Great Recession. This should help dissuade a major housing market crash. Housing economists believe that while housing prices may cool down, much to the enjoyment of buyers, we will not see a housing market crash.

Although not in the core Consumer Price Index, seasonal gas prices can be a key player in inflation rate movement. According to AAA, since the beginning of the year, average gas prices have increased .44 cents as of March 21. Year-over-year data shows that gas prices on average are .09 cents higher. The good news is that gas prices are down about 30% from June 2022 when the highest average gas prices was over \$5.00.

While economic and inflation trends typically affect equity markets more than election results, this year includes a presidential race that will keep everyone on their toes.

There are also key races for the Senate and House of Representatives and election results could impact government policy and tax law, leaving much up in the air. We can be sure that the media will be hyper-focused on the upcoming election, however investors still need to remain focused on key factors such as economic growth, inflation movement, and interest rate changes when determining the best path for their investment decisions.

As mentioned earlier, as of the quarter's end, equity markets were still experiencing a rally, however investors need to be prepared in case there is a potentially overdue pullback. 2023 and the first quarter of 2024 rewarded long-term investors and we stand by our belief that investing should be measured based on long-term results. We believe that volatility could still be prevalent and that investors should be cautionary when making any financial decisions. As always, a long-term strategy needs to be a benchmark for smart investors.

## The Highs and Lows of Gas Prices

The national average gas price as of March 21 was \$3.527 per gallon. States like California, Hawaii, and Washington bring these averages higher. Meanwhile, states such as Colorado, Mississippi and Kansas enjoy the lowest gas prices.

State	Price	State	Price
California	\$4.954	Colorado	\$3.077
Hawaii	\$4.699	Mississippi	\$3.080
Washington	\$4.375	Kansas	\$3.172
Nevada	\$4.266	Louisiana	\$3.176
Oregon	\$4.145	Texas	\$3.180
